

How to Order DTF Logos Using the Google Drive Assets and AustinDTF Gang Sheet Builder

1. Find and download the correct DTF logo asset 0:14

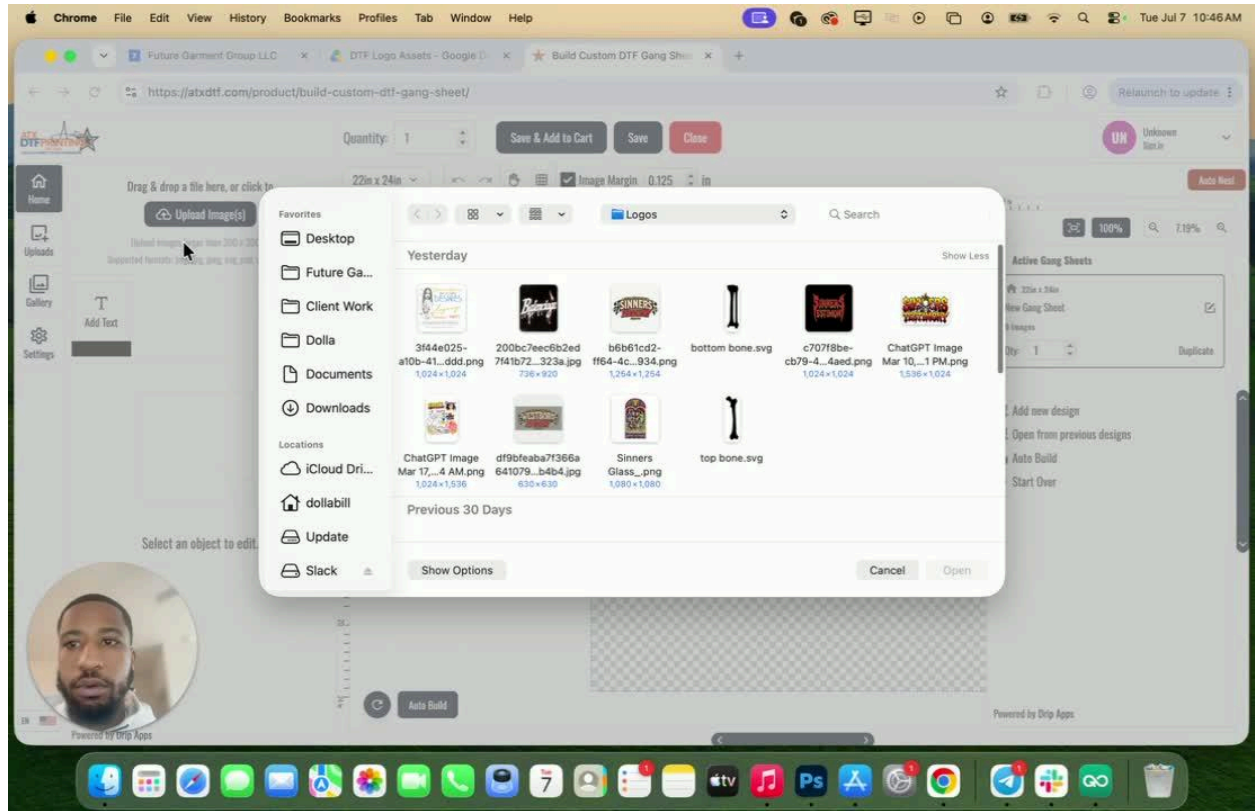

- Open **Google Drive** and go to **DTF Logo Assets**.
- Locate the logo you need for the specific item you're printing (for example, the **Eden t-shirt**).
- Click the **download** button to save the file to your computer.
- Organize the downloaded file in a folder if helpful, such as **DTFLogoAssets**.
- Once the file is saved locally, you're ready to build the gang sheet.

2. Open AustinDTF and start a new gang sheet 0:53

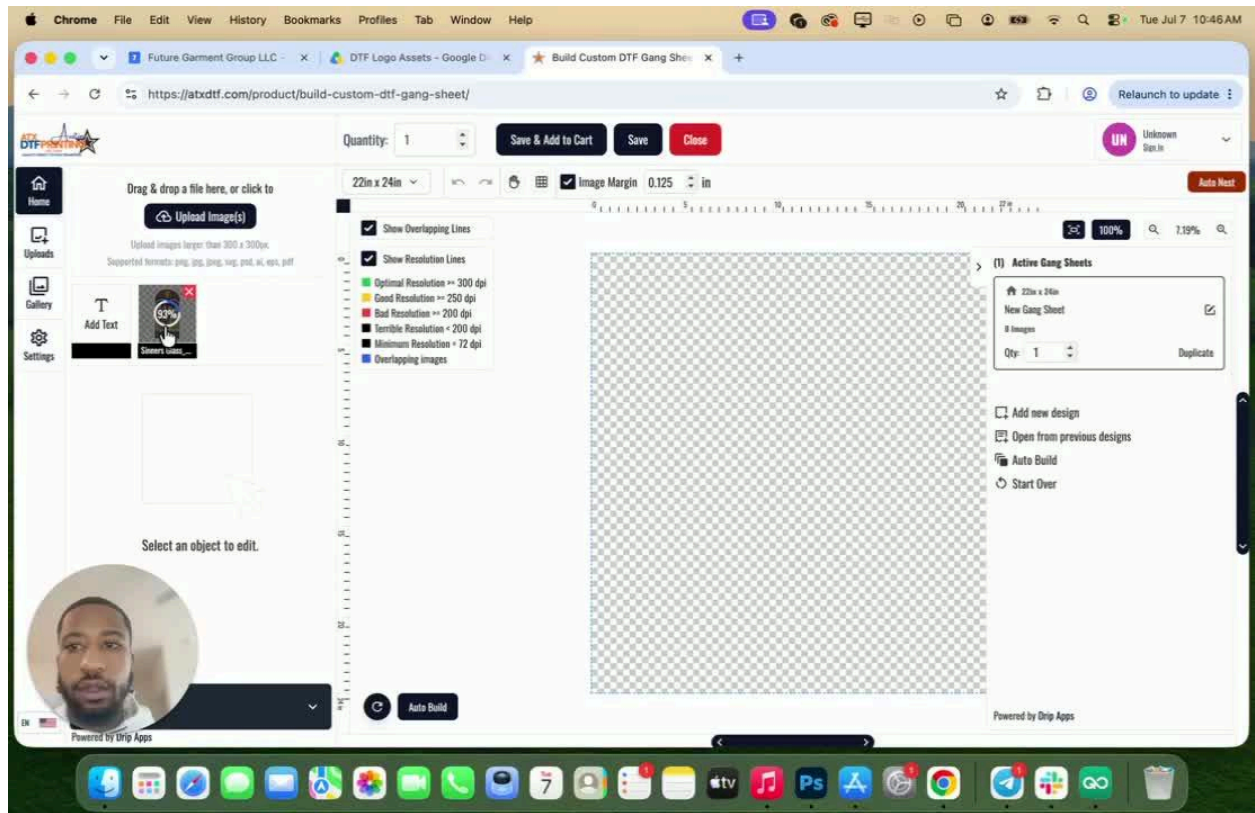

- Go to **austindtf.com**.
- Navigate to **DTF** and then choose **Build a Gang Sheet**.
- Select the gang sheet size based on:
 - **Width**: fixed at **22 inches**
 - **Length**: choose based on how many logos you need
- For the example in the transcript, a **24-inch length** is selected.
- Click **Build a Gang Sheet** to open a new sheet.

3. Upload your logo file [1:57](#)

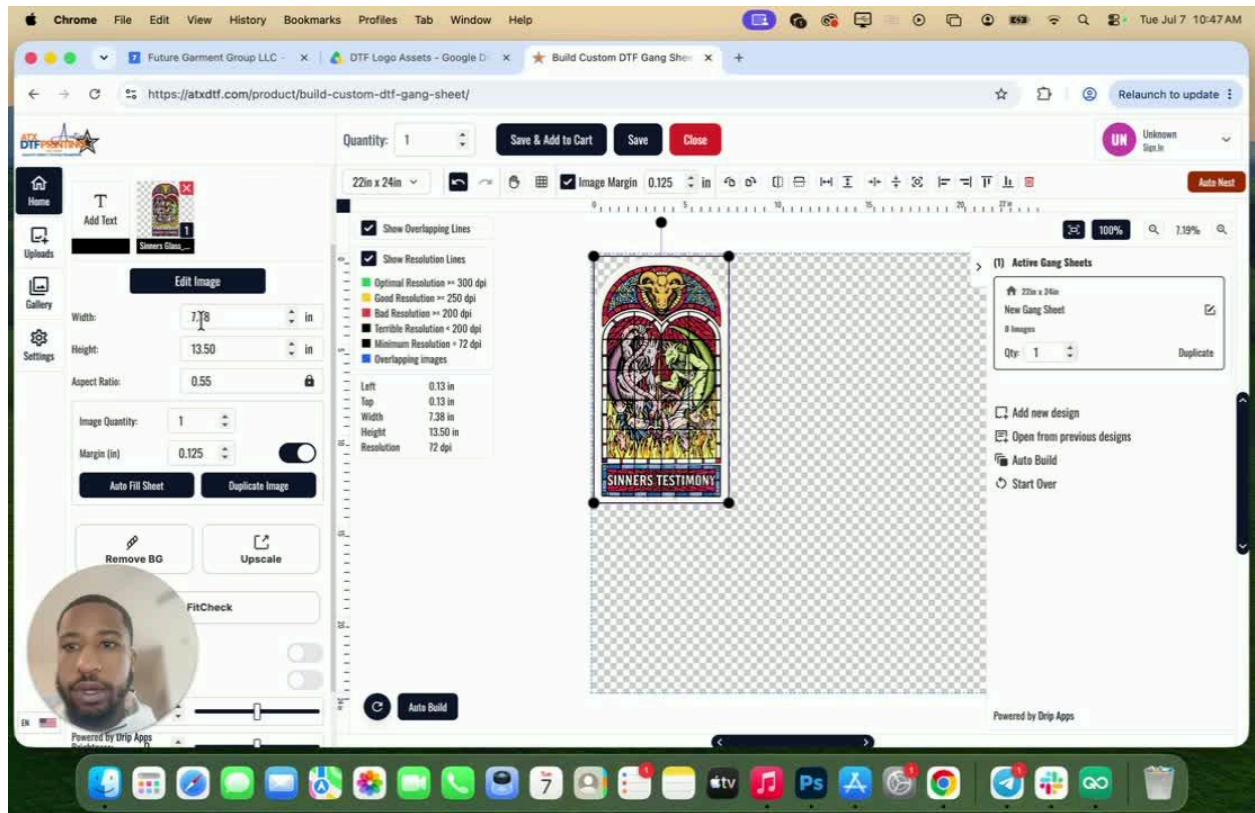

- Click **Upload Images**.
- Select the logo file from your computer.
- Click **Open** and wait for the image to load onto the sheet.
- Once uploaded, click the image to begin editing its size and placement.

4. Set the logo size correctly 2:11

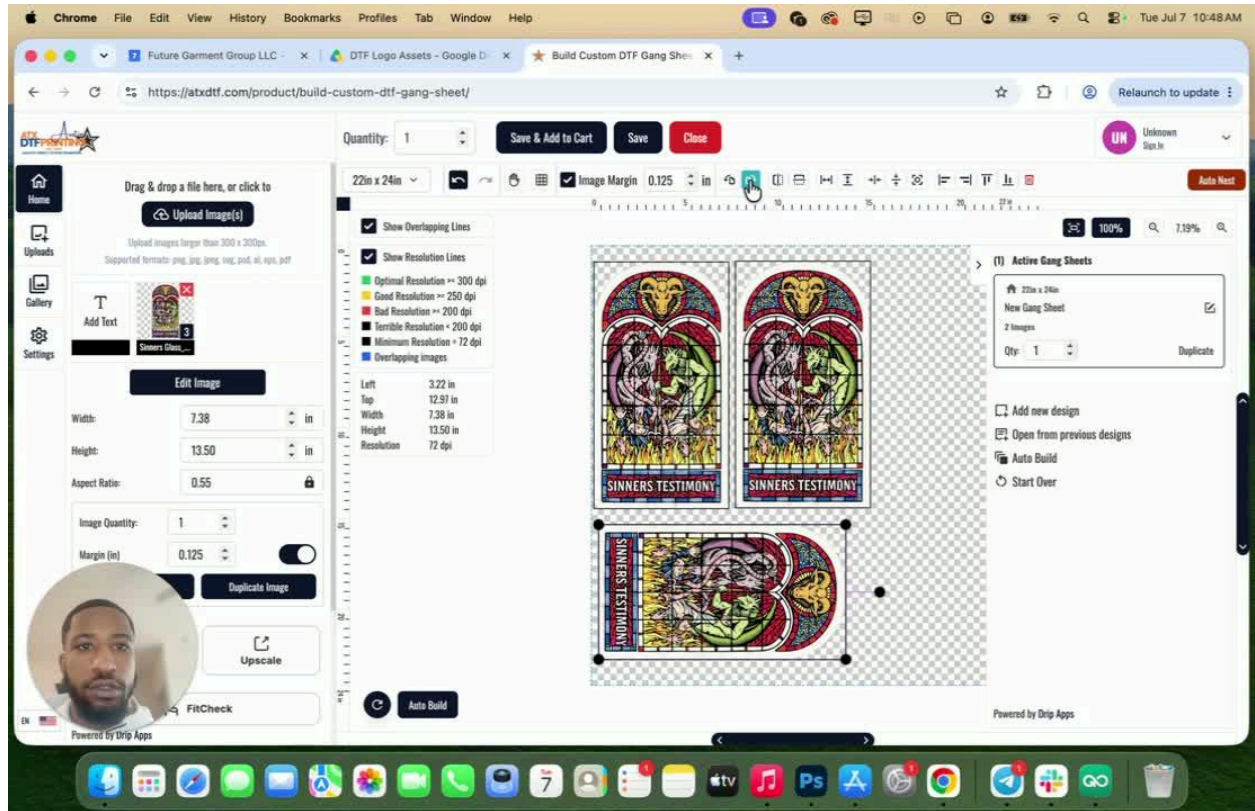

- Adjust the **height** of the logo to the required print size.
- For the stained glass denim example, the height is set to **3.5 inches**.
- Keep the **aspect ratio lock** enabled so the width updates automatically.
- You do **not** need to set width separately when the lock is on.

5. Duplicate and arrange logos to fit the sheet 2:43

- Use **Duplicate Image** to add more copies of the logo.
- If the sheet size is too small, the site may create a **new gang sheet** automatically.
- If needed, remove extra copies and rearrange the logos on the active sheet.
- You can **flip** a logo using the flip button to make better use of the available space.
- In the example, flipping the logo allows **three images** to fit on the same gang sheet instead of fewer.

6. Use leftover space efficiently 4:11

- After arranging the main logos, check the remaining blank space on the sheet.
- If there is room, you can add smaller items like **tag logos**.
- This helps avoid wasting space on the gang sheet.
- Once the layout is set, you can proceed with the ordering process.
